

IDENTIFICATION

CODE : GI-4-S1-EC-BIN
ECTS : 2

HOURS

Cours : 0h
TD : 4h
TP : 14h
Projet : 0h
Evaluation : 2h
Face à face pédagogique : 20h
Travail personnel : 12h
Total : 32h

ASSESSMENT METHOD

Written exam at the end of the tutorial part ("TD")
Project evaluation : collective presentation and written report

TEACHING AIDS

Slides

TEACHING LANGUAGE

English

AIMS

GI-4-S1-UE-GEDE
GI-4-S1-EC-BIN

General engineering skills:

- Develop an experimental approach;
- Identify, formulate and solve a complex engineering problem.

Specific Industrial Engineering skills:

- Observe, measure, analyze and interpret an activity or system from data
- Modeling, designing a system of information, decision-making and production of goods and services;
- Evaluate, prototype or simulate a system.

Abilities :

Collect customer needs for analysis; Identify sources of production data useful for an analytical approach; Process voluminous information for analysis; Exploit the data in the perspective of the analyzed activity: Carry out a project, working in a group.

Knowledge: operational and analytical database schemas; Elementary actions and sequencing for data transformation; Methods and tools for visualizing information from data.

CONTENT

DATA WAREHOUSE

1. Dimensional modeling for decision support systems
2. The Extract-Transform-Load (ETL) task : data cleaning, fusion and restructuration methods, ETL tools (Tableau)
3. Query tools and methods : reporting, scorecards, etc.

BIBLIOGRAPHY

Systèmes d'information décisionnels, E. Ferragu, 2013 (available at Doc'INSA)
- Piloter l'entreprise grâce au data warehouse, Jean-Michel Franco, Sandrine de Lignerolles, 2000
(available at the Industrial Eng. dept. local library)

PRE-REQUISITES

Relational Databases, SQL
