valerie.botta@insa-lyon.fr**AIMS**

- To develop the capacities of observation and strategic analysis of an organization.
- To integrate the technical and socio-economic aspects of a project or a process (of production, management...).
- To improve the capacities of communication and analysis of situation, by an precise identification of professional environment, by the multiplication of the contacts and the working relationships in the company, etc.

CONTENT

During 18 consecutive weeks (minimum), the final project assignment aims to resolve an industrial problem in a company.
The project provides a mission similar to the one of an engineer. It is in general a question of adopting a project manager behaviour taking part in different phases like analysis and design of a product, implementation of the manufacturing process, organization of the production system...
